5. Population of Vermont by single year of age, 2000 Census and 2007 estimates	29
6. Age-sex distributions of Vermont counties, 2000 Census and 2006-2007 estimates	30
7. Population of Vermont's Counties by Race and Ethnicity, 2000, 2007 estimates	46
8. Population of Vermont by Age, Race and Ethnicity, 2000, 2007 estimates	47

SUMMARY

This report contains Vermont census counts of population for 2000, and population estimates for 2006 and 2007. Population totals for counties and towns are presented (Tables 2 and 3, Figures 2 and 4). A listing of towns ranked in order of decreasing 2007 population is provided (Table 4). In addition, the age-sex distributions for the state and counties are given (Tables 5,6). Historical population data for Vermont counties are provided in Table 1. Housing unit estimates are no longer available in this report.

The population of Vermont was estimated to be 621,254 on July 1, 2007 (Table 1), slightly lower than the 2006 estimate of 623,908, but up from the census count of 608,827 on April 1, 2000. This is an increase of 12,427 people, or 2.0 percent from the census. Net migration in Vermont from 2000 to 2007 indicates an overall in-migration of 2,217 people (Table 2) since the Census, but the net migration from 2006 to 2007 was negative. Net migration is calculated as the difference between population change and natural increase (births minus deaths). The highest growth rates occurred in Grand Isle, Lamoille and Franklin Counties (Table 2, Figure 3). In Grand Isle County the large percentage increase is in part a reflection of the small population. The four southernmost counties all show a small decline in population since 2000.

Of the 255 towns and cities in Vermont, nine had total populations that exceeded 10,000 (Tables 3 and 4, Figure 2). These nine places accounted for 25.3 percent of the state's population. Ninety-one towns had resident populations less than 1,000 people, and three unorganized places in Essex County had no permanent residents (Avery's Gore, Lewis and Warner's Grant). Due to limitations in the data available for many towns, estimates may vary substantially from year to year. Observing the population trend for several years gives sense of the true population picture.

The fastest growing segment of the Vermont population is the 55-64 year old age group (Figure 5, Table 5). There has been a decline since the Census in the under 18 population, as well as in the 30-44 age group.

Population estimates by race and ethnicity for Vermont for 2007 are included in tables 7 and 8. These estimates are for the race and ethnicity categories used prior to the 2000 Census. Estimates utilizing the Census 2000 race and ethnicity categories are available from the US Census Bureau at www.census.gov.

The 2007 estimates published here were produced for the National Center for Health Statistics (NCHS) by the United States Census Bureau. The 2006 estimates are a slight modification of estimates from the same source. An explanation of the modifications made to the Census/NCHS estimates is given in the appendix.

Population figures are Census counts for those years when the census was taken, are mid-year estimates for all other years prior to 2000, are estimates as of April 1 for 2001-2002, and are again mid-year estimates for 2003-2007.

Table 2. Population estimates of Vermont counties for 2007, and components of change from April 1, 2000 to July 1, 2007.

Race and Ethnicity Data

The following tables (7 and 8) are a slight modification of race and ethnicity estimates produced for the National Center for Health Statistics (NCHS) by the US Census Bureau. Census 2000 introduced a more detailed race and ethnicity categorization scheme than had been used previously, and subsequent estimates produced by the Census Bureau have used the new categories. NCHS contracted with the Census Bureau to produce estimates which bridge the new race and ethnicity categories back to the categories in use prior to Census 2000. Estimates using the Census 2000 race and ethnicity categories are available from the US Census Bureau at www.census.gov.

While racial and ethnic minorities are only 3.9 % of the Vermont population (Figure 6) , in general, these populations are growing at a much faster rate than the non-Hispanic white population. The non-white population of Vermont was 16,897 in 2007, up 31.4% since July 2000. The number of persons of Hispanic origin was 8,170 in 2007, up 46.6% from July 2000. The white, non-Hispanic population increased less than one percent from 2000-2007 to 596,777. The American Indian, Eskimo and Aleut population was the only race category showing a decline since 2000. The Asian and Pacific Islander population has increased 31.6% since July 2000, and the Black population of Vermont has increased 60.2% in that time. Hispanic origin is an ethnic category, so persons of Hispanic origin are included in each race category. The exploded view in Figure 6 shows only the white Hispanic population, there are a small number of Hispanic people included in each of the three non-white race categories as well.

Figure 6. 2007 Distribution of Vermont Population by Race and Ethnicity

The racial and ethnic minority populations in Vermont are heavily concentrated in Chittenden County. While Chittenden County had 24.4% of the total population of Vermont, 45.6% of the non-white population and 32.2% of the Hispanic population resides in Chittenden County. The lone exception being the American Indian, Eskimo and Aleut population, where Franklin County has the largest population.

It should be noted that the year 2000 populations presented in tables 7 and 8 are estimates as of July 1, 2000 and not the April 1 Census counts. Information regarding the methodology used in producing the bridged race and ethnicity estimates is available from the NCHS at www.cdc.gov/nchs/about/major/dvs/popbridge/popbridge.htm.

Appendix

The 2006 estimates in this publication are a slight modification of the Bridged-Race Postcensal Estimates produced for the National Center for Health Statistics by the U.S. Bureau of the Census. The 2007 estimates published here are the NCHS/Census estimates with minor exceptions for one town and two unorganized places.

NCHS contracts with the Census Bureau to produce the Bridged-Race Postcensal Population estimates, which collapse the original estimates using the Census 2000 race and ethnicity categories into the categories in use prior to Census 2000, making trend analyses possible. For this reason, it was decided that the NCHS Bridged-Race estimates would be used as the starting point for the estimates which would be published by the Vermont Department of Health beginning with the 2003 estimates. Because the estimated populations for the under 5 age group were not consistent with VDH vital records (birth) data, the NCHS estimates were modified slightly from 2003 to 2006, resulting in the estimates published here. For 2007, no adjustments to the NCHS age group estimates were made. An explanation of the modifications for 2003-2006 follows.

The number of births in a given year should be a reasonably good estimate of the under 1 population for that year, but the Census Bureau estimates of the under 1 population have not been close to this number. For example, the number of Vermont resident births for the year ending July 1, 2003 was 6,506 while the Census/NCHS estimate of the under 1 population on July 1, 2003 was 5,861. This discrepancy prompted a closer look at the estimates for the youngest age categories and it was decided that VDH would estimate the under 5 population by county using vital records data. A detailed explanation of the methodology used for calculating the under 5 population is available from VDH by calling 802-863-7300. The methodology for the original Census/NCHS estimates is available on the internet at

<http://www.cdc.gov/nchs/about/major/dvs/popbridge/popbridge.htm>.

Because VDH estimates the under 5 population to be greater than the Census/NCHS estimate, some modifications were made to the estimates for 5-64 year age groups so that county and state totals would be consistent with those published by NCHS. Because the Census/NCHS data utilize Medicare data for the 65 and older population, these were assumed to be the most accurate of the age group estimates and were not modified.

The town estimates for 2006 and 2007 published here are those produced by the US Census Bureau, with a minor exception. The Census Bureau estimated that one person lived in each of Lewis and Avery's Gore in Essex County. These places have previously been uninhabited, and VDH has received no compelling evidence to suggest that this has changed, so VDH continues to estimate zero population in these places and added those people to the largest neighboring town, Brighton. Information about the Census Bureau's estimate methodology is available at www.census.gov.
